Indonesia's fast-growing manufacturing sector has long relied on international trade events held overseas to source the latest production equipment. That reliance is set to change with the arrival of CMES Indonesia, the country's first dedicated international machine tool exhibition, scheduled for its inaugural edition in 2026.

Event Overview

CMES Indonesia International Machine Tool Exhibition 2026 is positioned as a specialised trade fair focused on machine tools, metalworking, and allied technologies. The event aims to bring together global machine tool manufacturers, local distributors, and industrial end-users under one roof.

By creating a domestic platform, the exhibition removes the need for Indonesian manufacturers to travel abroad to evaluate machinery, thereby reducing procurement lead times and enabling hands-on comparison of competing technologies in a single visit.

Timing and Venue

The debut edition is scheduled for September 3 to 5, 2026. The three-day format is typical for industrial trade fairs, allowing sufficient time for technical demonstrations, business meetings, and knowledge-sharing sessions.

Jakarta has been selected as the host city, leveraging its role as Indonesia's commercial and logistics hub. The venue, though not yet named in early announcements, is expected to be one of the city's major convention centres capable of accommodating heavy machinery displays and live cutting demonstrations.

Industry Context

Machine tool exhibitions serve a critical function in the global manufacturing supply chain by connecting producers of CNC lathes, milling machines, presses, and automation systems with factories seeking productivity upgrades. In Southeast Asia, established events in Thailand and Singapore have long dominated, leaving Indonesia underserved despite its large industrial base.

A local exhibition aligns with government efforts to deepen the country's industrial structure. Access to modern machine tools is a prerequisite for moving beyond basic assembly into higher-value precision manufacturing, and a regular in-country fair can accelerate technology diffusion to small and medium-sized workshops that otherwise lack exposure to global innovations.

Significance for Indonesia

The launch of CMES Indonesia arrives as the country pushes to expand its manufacturing contribution to GDP and attract foreign investment in sectors such as automotive, electronics, and metal fabrication. A dedicated exhibition signals that international machinery builders see long-term demand in the Indonesian market.

For local enterprises, the fair is likely to offer a practical opportunity to benchmark equipment, attend technical seminars, and negotiate directly with suppliers. Over time, a recurring annual event could become a barometer for investment sentiment in Indonesia's capital goods sector.

The exhibition debuts at the Jakarta International Expo, marking the first dedicated machine tool trade fair aimed at the Indonesian market.

Key Figures

This story is anchored to specific dates or periods such as September 3–5, 2026. Those reference points make it easier to track how the situation develops over time.

- **Scheduled dates:** September 3–5, 2026 Three-day event for the inaugural edition

Why This Matters

Indonesia's manufacturing sector has grown without a specialist machine tool exhibition, forcing companies to source equipment overseas. The arrival of CMES Indonesia provides a dedicated platform for technology transfer, supplier competition, and local procurement, which can speed up industrial upgrading and support the country's ambition to move into higher-value precision manufacturing.

FAQ

What is CMES Indonesia?

It is a newly announced international machine tool exhibition making its debut in Jakarta in 2026. The event focuses on machine tools, metalworking technologies, and related industrial equipment.

When will the exhibition take place?

The inaugural edition is scheduled for September 3 to 5, 2026, over three days.

Where is it being held?

The exhibition will be held in Jakarta, Indonesia. The specific venue has not been disclosed in early announcements, but it is expected to be a major convention centre in the city.

Why is this event significant for Indonesia?

It fills a gap in the market by offering a local platform for manufacturers to access global machine tool technologies without travelling abroad. This can accelerate technology adoption and support the growth of Indonesia's manufacturing sector.
